

Howto resize Xen Disk Image ?

Problem: I am using Xen to create Virtual Machines, but how can I resize the virtual disk image?

Solution:

This solution is to increase your virtual disk size:

```
cd /var/lib/xen/images/vlinux1
```

```
#use dd to create a 1 GB file
```

```
dd if=/dev/zero of=Tempfile bs=1024 count=1000000
```

```
#append this file to virtual image file (in this case is hda)
```

```
cat Tmpfile >> hda
```

```
resize2fs -f hda
```
